PROGRAMME:

Welcome

In this webinar, EUomo will focus on the new support that may be given using new on line and free to use tools to support the Patient/Urologist conversation in the critical moment of decision in cases where Active Surveillance may be considered versus other treatments. We have invited one of the researchers in this area on this new way of added support for decision making.

What is the new information that is offered by Predict Prostate to support critical decision making?

Which is the typical decision-making situation in patients in cases when they may choose active surveillance as an effective strategy and how does Predict Prostate help?

How does the Predict Prostate tool help to balance the value of treatment against other factors like a man's age and other illnesses?

What information was used to developed this specific tool “Prostate Predict “?

How reliable and robust is the estimates it provides and what is the evidence that it makes a difference

Which are the limits of this application in the critical moment of decision?

What types of prostate cancer is this not suitable for?

Questions and answers
