

## Active Surveillance – A Patient Survey

AnCan Virtual Support Group for Active Surveillance, Active Surveillance Patients International, Prostate Cancer Support Canada, and The Active Surveillor newsletter are asking your participation in a survey to obtain patient perspectives on Active Surveillance. The results of this survey will be used in informing appropriate bodies about our views on Active Surveillance.

We define Active Surveillance as a management strategy for patients with initially diagnosed low-risk Gleason 6 prostate cancer to favorable intermediate-risk Gleason 3+4 prostate cancer, but not recurrent disease.

Please answer all questions. All information will be kept confidential. You will receive a summary of the results. **If you receive this invitation more than once, please only respond once.**

To participate in the survey, click here: <https://www.surveymonkey.com/r/W69XXDS>
